Compensating for Memory Deficits Using a Systematic Approach Susan K. Kime

Memory disorders occur in people with a variety of diagnoses, such as traumatic brain injury, stroke, aneurysm, brain tumor, epilepsy, Parkinson's disease, and multiple sclerosis. To optimize clients' levels of independence in the everyday world, occupational therapy professionals must help them compensate for their memory problems. However, successful treatment for memory deficits is not simply a matter of recommending that a client get a personal organizer; indeed, it is much more complex, involving much time and hard work. This practical book outlines the elements of the systematic approach that can be used when working with clients to implement compensations for their memory impairments. Drawing on the author's considerable experience and expertise, this book provides readers with an understanding of these issues and the knowledge with which to assimilate and overcome clients' negative influences to achieve positive outcomes for them, their immediate families, and communities.
