## **Rules and Formulæ in Elementary Mathematics: With Notes** B. Arnett

From the PREFACE.

A Student, after carefully working out the different formulæ in Mathematics, still requires great familiarity with these in order readily to apply them to the solution of various problems. If he works out a good number of examples illustrating the formulæ, he gains this familiarity in the best possible manner. But immediately before his examination he ought to review all his previous work, and this will be most advantageously done, if he has the rules collected in a condensed form.

Experience has taught the Author that school boys want something more than this, that not only must they work numerous examples and have general papers on the back work, but that they must also have periodical repetition of the formulæ, which will otherwise soon become strangers to them, and be a constant barrier to their progress in the higher work.

He has, therefore, written the following pages to afford easy reference, and to have the rules and formulæ so arranged that their repetition with viva voce examination on their application may be more conveniently made a part of the class work.

The notes consist of propositions, which have been written at different times to explain and illustrate difficulties that have most frequently been encountered in teaching.

Care has been taken in writing out the formulas to preserve the due order of the symbols, an arrangement that will be of great assistance to the memory, provided a like care is exercised by the learner. Any suggestions or corrections from Masters or Scholars will be thankfully received.
