Book Description

Writing concurrent and parallel programming applications is an integral skill for any Java programmer. Java 9 comes with a host of fantastic features, which includes significant performance improvements and new APIs. This book will take you through all the new APIs, showing you how to build parallel and multi-threaded applications. It covers all the elements of the Java Concurrency API, with essential recipes that will help you take advantage of the exciting new capabilities.

Inside you'll discover a whole range of recipes from everything like thread management, synchronization, executors, parallel and reactive streams, and a whole lot more. If you're a Java developers who want to learn concurrency in a practical manner to keep by your side then this title is one you need!

What you will learn

- Find out to manage the basic components of the Java Concurrency API
- Use synchronization mechanisms to avoid data race conditions and other problems of concurrent applications
- Separate the thread management from the rest of the application with the Executor framework
- Solve problems using a parallelized version of the divide and conquer paradigm with the Fork / Join framework
- Process massive data sets in an optimized way using streams and reactive streams
- See which data structures we can use in concurrent applications and how to use them
- Practice efficient techniques to test concurrent applications
- Get to know tips and tricks to design concurrent applications
